MongoDB • MySQL • PostgreSQL •

Firebase • AWS

OTHERS

Familiar:

Java • C++ • Python • Oracle • Matlab

PROJECTS

REDDIT CLONE USING NEXTJS | FULL-STACK PROJECT

Live | Code

- This project is a Reddit clone that includes almost all features of Reddit. Users can **create communities**, **join and leave** communities, **create posts**, **upvote and downvote** posts, **comment** under posts, and **log in** and **sign up** with email and password or Google.
- The project is built in TypeScript, using Firebase as the database, authentication, and backend, Chakra UI for the interface, React and Next.js as the frontend framework, and Recoil for state management.

NETFLIX - VIDEO STREAMING PLATFORM | FULL-STACK PROJECT

Live | Code

- This is a Netflix clone web application built with **NextJS**, **React** and **Tailwind CSS**. It allows users to browse and watch movie trailers from various genres, search for movies, and sign up and log in to the application.
- The project is built in TypeScript, using Firebase as the database, authentication, and backend, Tailwind CSS for the interface, React and NextJS as the frontend framework, and Recoil for state management.

LEETCLONE - REAL TIME CODE EDITOR | FULL-STACK PROJECT

Live | Code

- This is a Real Time Code editor web app built with **NextJS**, **React**, and **Tailwind CSS**. It allows users to login/signup with Google. Also, using codemirror, we can write, check and submit code in the application.
- The project is built in TypeScript, using Firebase as the database, authentication, and backend, Tailwind CSS for the interface, React and NextJS as the frontend framework, and Recoil for state management.
